It may not be a lot, but we can use them immediately if you report them to the base [Mother]. This conversation occurs only when the player approaches the fuel resource kit. They are required to develop the development of the base, support and the medical platform. It can be converted to GMP to a high rate. "à € ¢ à € ¢ Description of precious metals in metal Gear Solid V: The Phantom pain" Materials used to make precious metals. Notes and references ~ Metal Gear Solid V: The Phantom Pain (Demo E3 2015), Kojima Productions (2015) kazuhira Miller: These materials [Fuel resources] have already been processed. They are the only materials that are not necessary to develop the base of the mother itself or the various operational bases forward, even if they are necessary for some weapons and development of equipment. They can be easily found in different areas, including the OHB Zero, Nova Braga airport and the cave at the beginning of the mission 12. Also necessary for the expansion of basic services. "À, à, ~ à € ¢ Description of common metal metals Gear Solid V: The Phantom pain" Materials for fusion of metals widely used in large quantities. Moreover, they also had signs "TP" on them similar to research containers in "damn legacy", suggesting a connection between the two similar to the containers of processed materials and material containers. Unprocessed materials are much more common but require that the player waits the basic development team of the base base to process them before they can be used. Required for the development and use of ammunition, support weapons and consumables, and for basic expansions. "À, à, ~ à € ¢ Description of organic materials in metal Gear Solid V: Phantom pain" Materials consisting of organic material. Organic materials "Materials consisting of organic material. Required for development The use of ammunition, support weapons and consumer items, and to expand the basic structures. Insince these materials have not been processed, they must be processed by the basic basis Unit before they can be put into practice." Ç ÂDescription of the biological material in the 2015 Gamescom Mother Base/FOB demo for Metal Gear Solid V: Phantom pain may be processed up to 2,500 each time offline. They are very valuable and can be sold for 1,000 GMP each. PuÀ' can be converted to GMP at high speed. Since these materials are not processed, they must be processed by the Base Development Unit before they can be put into practical use." À ¢ AAUnprocessed precious metals description in Metal Gear Solid V: The Phantom Pain Precious metals can be processed up to 250 at a time offline. Necessary for the development and use of ammunition, as well as for the expansion of basic facilities." À ¢ ÂDescription of the fuel resources in Metal Gear Solid V: Phantom pain "Materials used to power engines and generators. It's worth 200 GMP a piece, Diamonds are included in this category. Necessary also to expand the basic facilities.As these materials are not transformed, they must be processed by the Base Development Unit before they can be put into practical use." Ç ÂDescription of base metals in the 2015 Gamescom Mother Base/FOB demo for Metal Gear Solid V: Phantom Pain is needed for the development of the Combat, R&D and Intel platforms. Required for the development and use of ammunition, support weapons and vehicles, as well as© to expand basic facilities." À ¢ ÂDescription of minor metals in Metal Gear Solid V: Phantom pain "Materials used to smell relatively rare metals such as chromium, manganese and nickel. "Metal melting materials widely used in large quantities. However, it will take long time to process them. It includes iron ore, copper ore and bluxite. Sign in to edit in Metal Gear Solid V: Phantom pain, the player can collect various materials for the development of otisiuqer otisiuqer nu onocsiutitsoc essE .emaitseb id ituifir e iborcim ,ilairsudni erutloc ,ongel ednerpmoC .ilociev e erutazzertta ,imra eirav emoc ~Àsoc ,esaB The control platform. "Materials used for having relatively rare metals such as chrome, manganese and nickel. If seeks to develop these weapons, infiltrating a basic development unit with a value of over 10,000 months of unprocessed precious metals is desirable to Replace those lost treated. As such, they serve as the largest obstacle to players when bases are developed. "The materials used to make precious metals. They can be sold for 100 GMPs each. Required for the development and use of ammunition, support weapons and vehicles, as well as expanding the basic structures .ince that these materials are not processed, they must be processed by the basic development unit before they can be put into use practical. "À, à, ~ à € ¢ Metals Minor Description In 2015 Gamescom mother base base / FOB demo for Gem Gear Solid V: Phantom pain can be processed a maximum of 1,250 at a time. Includes gold mineral, silver mineral and corundum. Required for the development and use of ammunition, support weapons, and vehicles. Three red containers (1500 total) can be found at Nova Braga airport, but I am at home and require the Fulton wormhole to be extracted. Finding materials already transformed into the field will lead to diamond dogs able to use the materials immediately but are much lower in quantity. [1] Every time a material is worked with its maximum amount, 250,000 GMP materials will be processed. Many weapons Grade 7 or higher require 200,000 precious metals or more, quickly Depletin the precious metal tank of the G player. Fuel resources "Materials used to power engines and generators. Includes oil, coal, natural gas, as well as uranium mineral. Required for the development and use of ammunition, as well as expansion of basic services. These materials have been processed, must be processed by the UPS development programs before they can be put into practical use. " â € â€ Fuel Resources Description of raw materials in metal raw materials Gear Solid V: Phantom Pain Fuel resources are the most common requirements' Bases, which are needed to develop command platform, combat platform, research and development platform, basic development unit platform and medical platform. Blueprints / First Aid Manual Although technically non-material, have been stored in cases similar to processed materials. materials.
